

Satpro Installation on tripod sjj32

Place SATPRO on SJJ32 tripod

Take the SATPRO from the transport case, for a better grip you can try to hold it with both hands by the side bars or from the “Y” axis, be careful. SATPRO has an approximate weight of 12Kg, place the “Y” axis correctly inside the aluminum part of the tripod.

Insert the M10 knobs: Rotate the SATPRO “Y” Axis until you see that the two holes coincide in order to screw the two M10 knobs and fix the SATPRO together with the tripod.
